Gantry sets the dimensions of the logo, so CSS modification is unnecessary.

### Step 1 - Open the File

Open the **logo-source.png** file in Adobe® Fireworks.

- In the right column, find **Layers**. Select the **Web layers** directory and click the eye icon to the left of the logo slice (the green object). This will make the slice invisible so you can edit the file.

### Step 2 - Text/Slogan/Icon Editing

Double click on the logo text. Now you can edit the text of logo to your choosing. Edit the icon as desired.

### Step 3 - Slice Modification

- Reactivate the Slice in the Web Layers column, this will place a green rectangle over the logo image. Change the size of the slice (or move it) to match the new size if applicable.

### Step 4 - Export

- Now you will want to export the logo. Right click on the image slice and select **Exported Selected Slices...** from the contextual menu. Proceed to export it to your computer for uploading.

### Step 5 - Multiple Frames/States

If there are multiple logos for a template, they are located in **Frames** or **States** within Fireworks.

PAGES	STATES	LAYERS		
<input checked="" type="checkbox"/>	1	Style1	7	<input type="radio"/>
	2	Style2	7	<input type="radio"/>
	3	Style3	7	<input type="radio"/>
	4	Style4	7	<input type="radio"/>
	5	Style5	7	<input type="radio"/>
	6	Style6	7	<input type="radio"/>
